15. Big screens and holding the phone sideways
16. Troubleshooting and questions

1. Welcome

Vitalog keeps every lab report for everyone you look after — you, your partner, your children, your parents — in one place. Take a photo of a report or pick a PDF, and Vitalog reads it for you: every test, its value, the lab's normal range, and whether it's high or low. It sorts each test into groups like **Blood**, **Thyroid**, **Kidney** and **Vitamins**, and shows how each value changes from report to report.

> **Your reports stay on your phone.** Vitalog reads them right here on the phone. Nothing is sent anywhere unless you sign in and tap **Sync** — and even then your data is locked so that only your family's phones can read it.

What Vitalog does not do

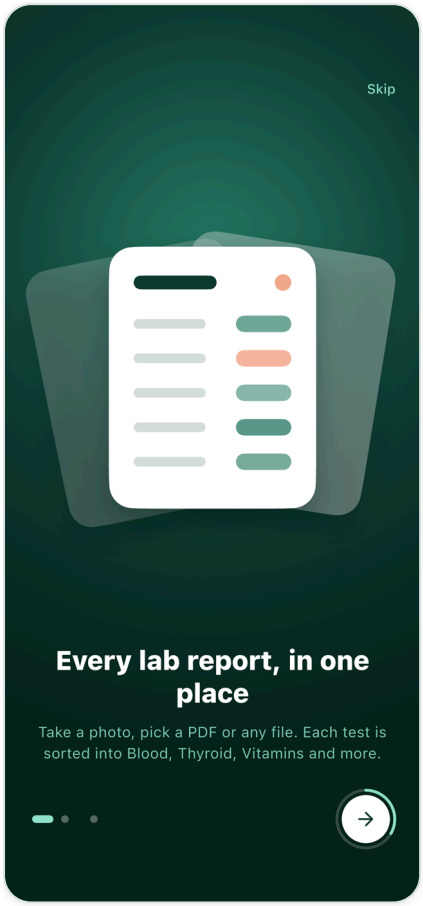

- It does not diagnose or give medical advice. It shows what your lab printed. Always talk to your doctor about your results.
- It does not give you a "health score".
- It never asks you to type results in. If it isn't sure about something, it marks it **Needs review** so you can check it against the paper.

Words used in this manual

Word	Meaning
Report	One lab report (a photo, PDF or file you added).
Test / result	One line on the report, for example "Hemoglobin 12.8 g/dL".
Range	The normal range the lab printed next to the value.
Usual range	A standard range Vitalog uses only when the lab didn't print one. It is always labelled "usual range".
Sync	Backing up to your account so you can restore on a new phone or share with family.

2. First launch

The first time you open Vitalog you'll see the logo draw itself, then three short welcome pages.

Every lab report, in one place

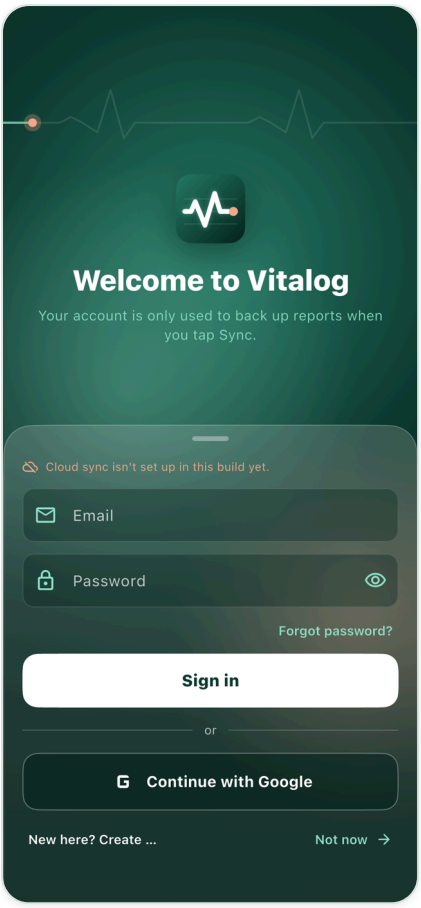

Read right on your phone

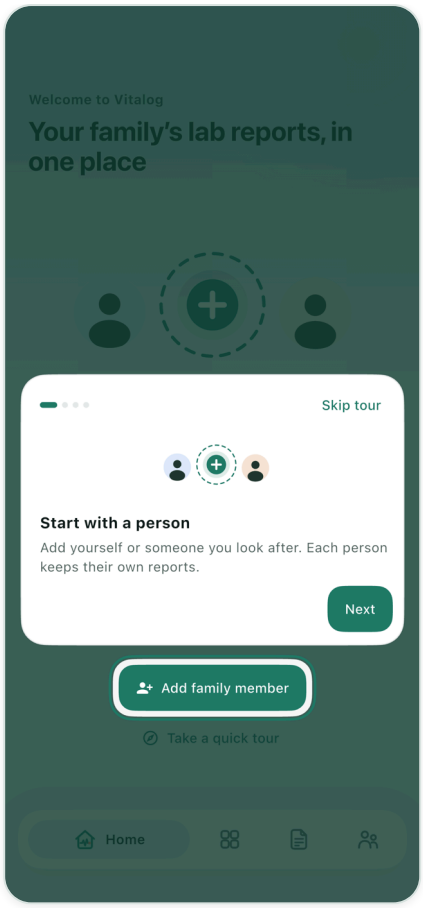

Care for the whole family

1. Swipe or tap **Next** to move through the pages (or **Skip**).
2. Tap **Get started**.
3. Sign in with Google or email — or tap **Not now**. You can use everything except Sync and sharing without an account, and sign in later from the Family tab.
4. A short tour highlights the main buttons. Tap anywhere to move on. You can replay it later with **Take a quick tour**.

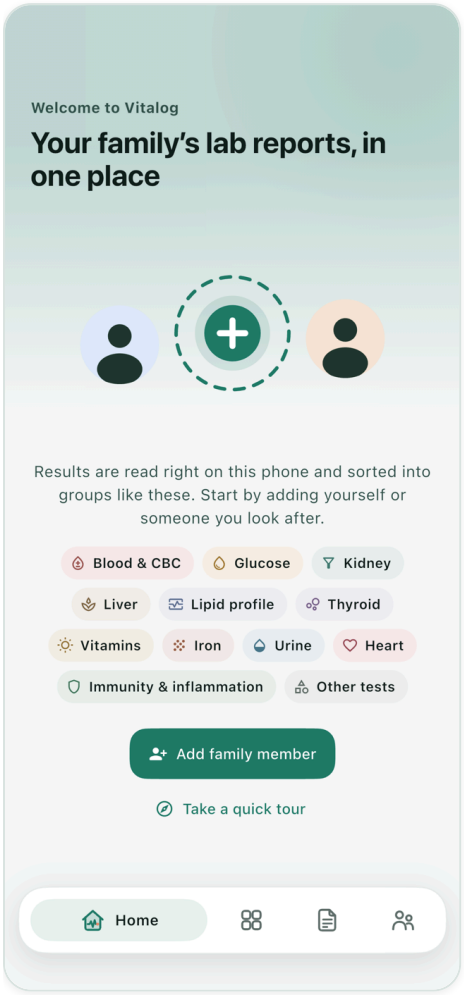

Sign in, or tap Not now

The first-run tour

3. Finding your way around

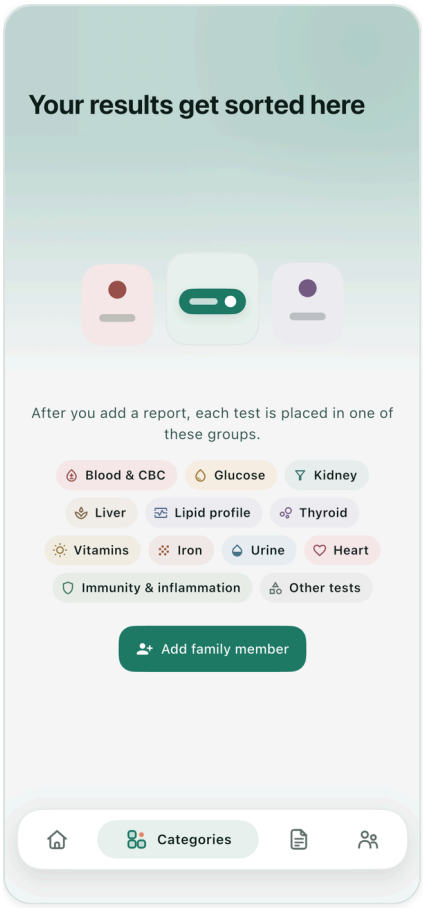

Home before anything is added

Everything you read is at the top of the screen; everything you **do** is in the tray at the bottom, where your thumb reaches.

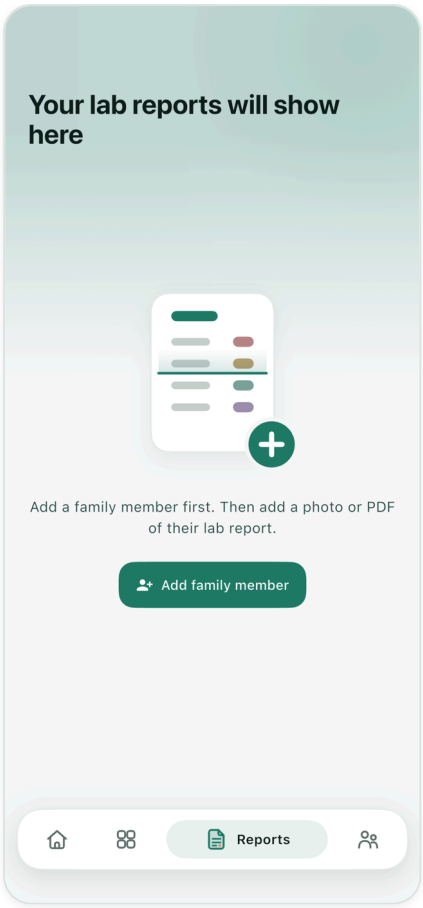

The bottom tray

- **Person button** (left) — shows whose reports you are looking at. Tap it to switch to another family member or add one.
- **Add a report** — the main button.
- **Sync** — appears on the Reports tab when you're signed in.
- **Tabs** — the selected tab shows its name; the others show only their picture:
  - **Home** — a snapshot of the person's latest results.
  - **Categories** — results grouped by body system.
  - **Reports** — every report you've added, newest first.
  - **Family** — family members, your account and settings.

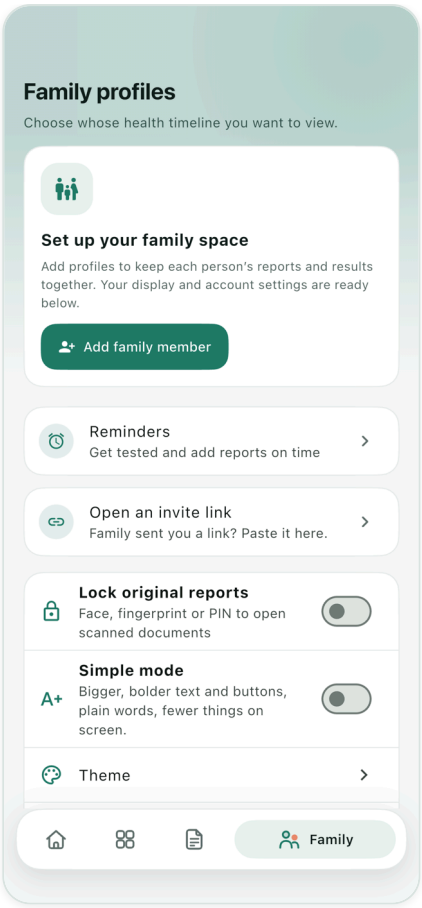

Before you add anything, each tab shows a short animated picture and what will appear there.

Categories, empty

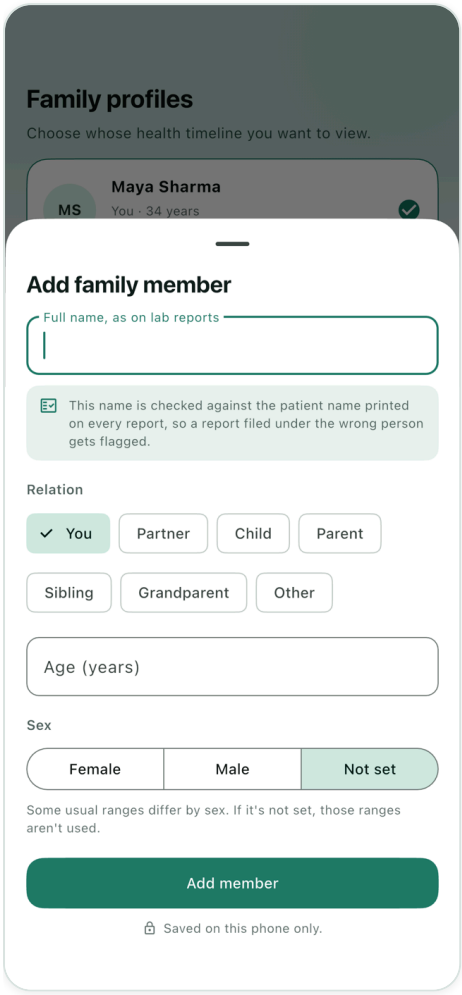

Reports, empty

Family, empty

Tip: press and hold any item (a report, a family member) to see everything you can do with it. The ··· button shows the same choices.

4. Add your family

Add family member

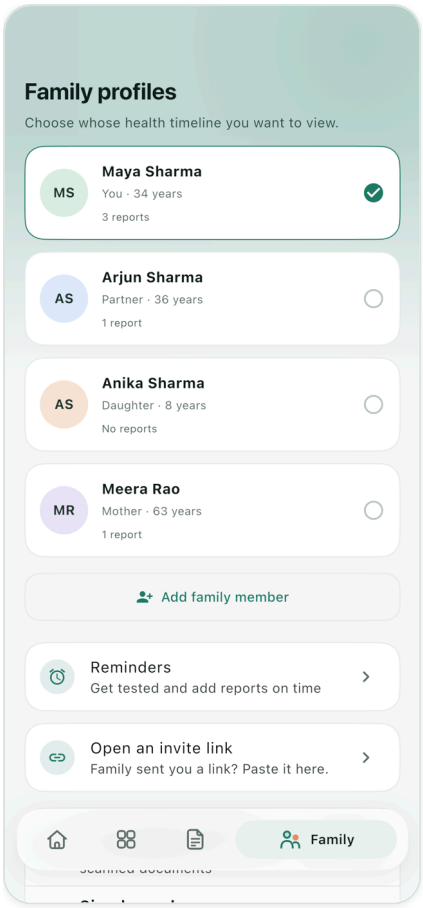

1. Go to the **Family** tab and tap **Add family member** (or tap the person button in the tray, then **Add family member**).
2. Type their name and choose how they're related to you (You, Partner, Parent, Child…).
3. Enter their age and choose their sex (or leave it as Not set). Vitalog uses these only to pick the right range when a lab didn't print one — it never guesses them.
4. Tap **Add member**.
5. To add a photo, press and hold the member later → **Edit details**.

Switch person

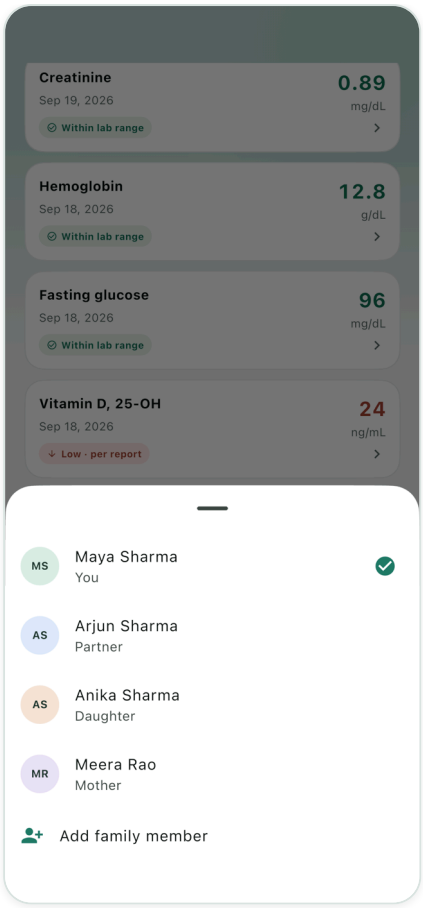

Tap the person button in the tray and pick someone. You stay on the same tab. Tapping someone on the Family tab takes you to their Home.

Edit or remove

On the Family tab, press and hold a member → **Edit details** or **Remove**. If they have reports, Vitalog tells you how many will be removed before you confirm.

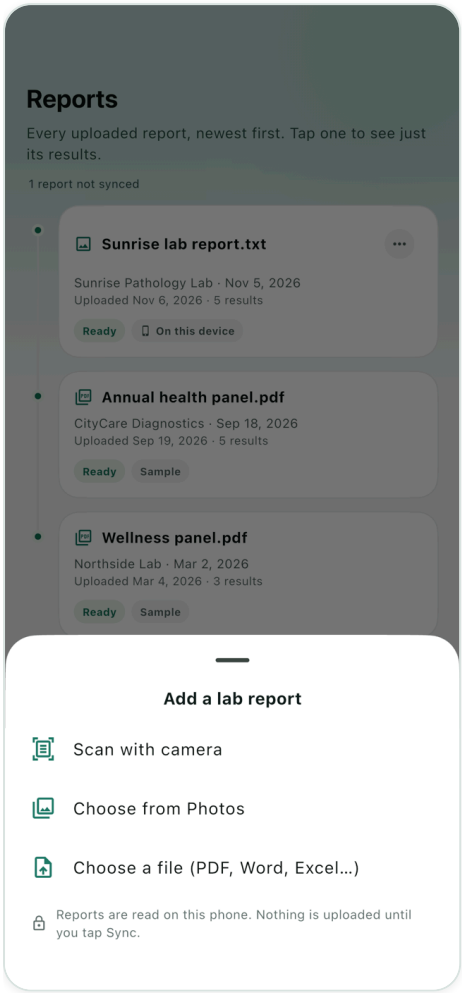

The Family tab

Switching person from the tray

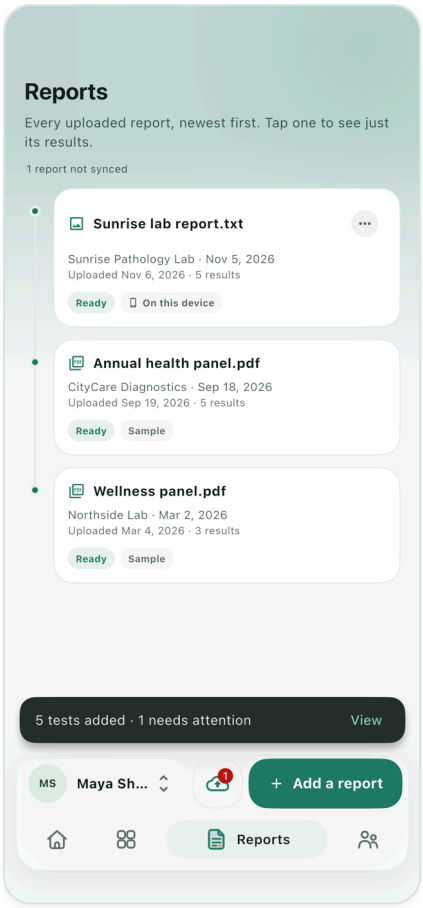

5. Add a lab report

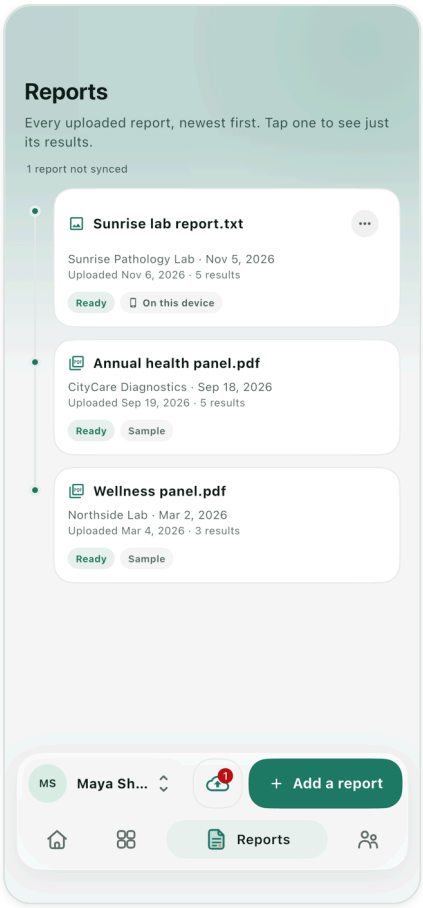

Three ways to add a report

1. Make sure the right person is shown in the tray.
2. Tap **Add a report**.
3. Choose:
    - 4. **Scan with camera** — lay the report flat in good light; the scanner finds the page edges.
    - 5. **Choose from Photos** — a photo or screenshot of the report.
    - 6. **Choose a file** — PDF, Word, Excel, CSV, text, web page or an email with the report attached.
7. The report appears on the timeline as **Reading…**. You can keep using the app.
8. When it's done, a message says how many tests were added and whether any need attention. Tap **View** to open it.

The first time, Vitalog asks whether to lock your original documents with Face ID / fingerprint. See chapter 12.

Done — the message says what was found; tap View

The new report on the timeline

What the report status means

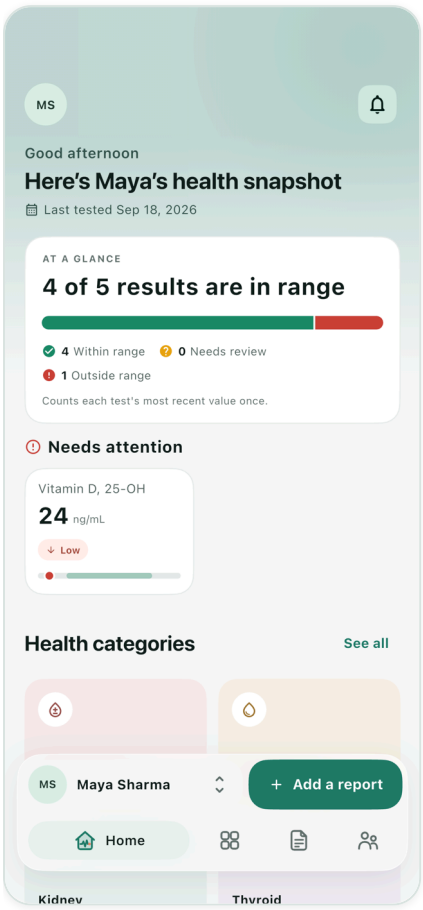

Status	Meaning	What to do
Reading…	Vitalog is reading the report.	Wait, or tap **Cancel**.
Ready	All tests were read.	Nothing.
Needs review	The date wasn't found, a test had no range, or a test needs a group.	Open the test and check it against the paper (chapter 8).
Couldn't read	No tests were found, reading took too long, or the file type isn't supported.	Tap **Try again**, or retake the photo in better light.

Vitalog also checks for you

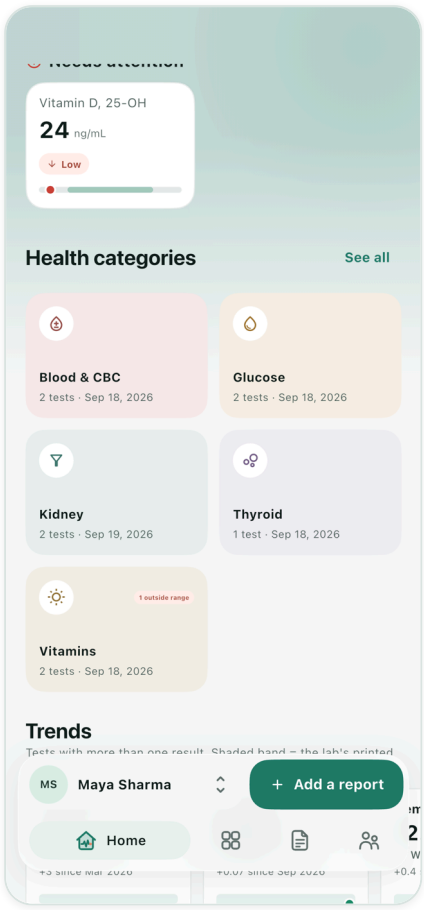

- **Same report twice** — if you add a report that's already there (the same file, or another photo of the same paper), Vitalog keeps one copy and tells you.
- **Wrong person** — if the name printed on the report doesn't match the person you chose, the timeline asks: **Keep here** or **Move to…** another member.

6. Your Home screen

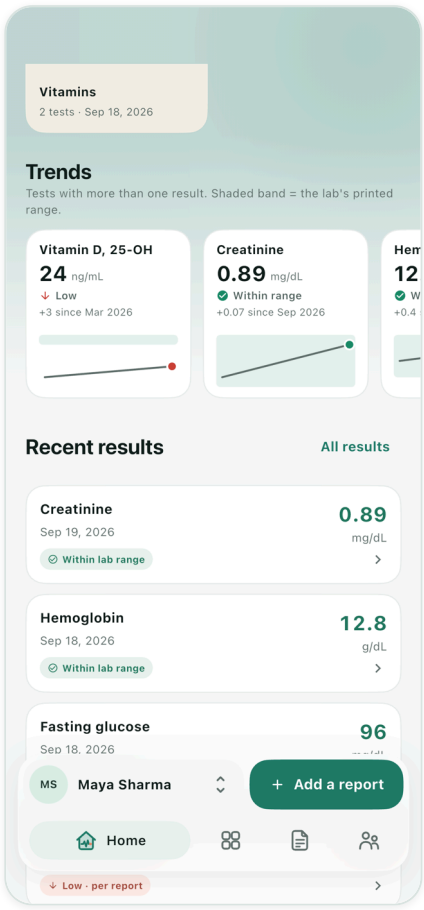

Home answers "how is this person doing, according to their reports?" at a glance.

Greeting and At a glance

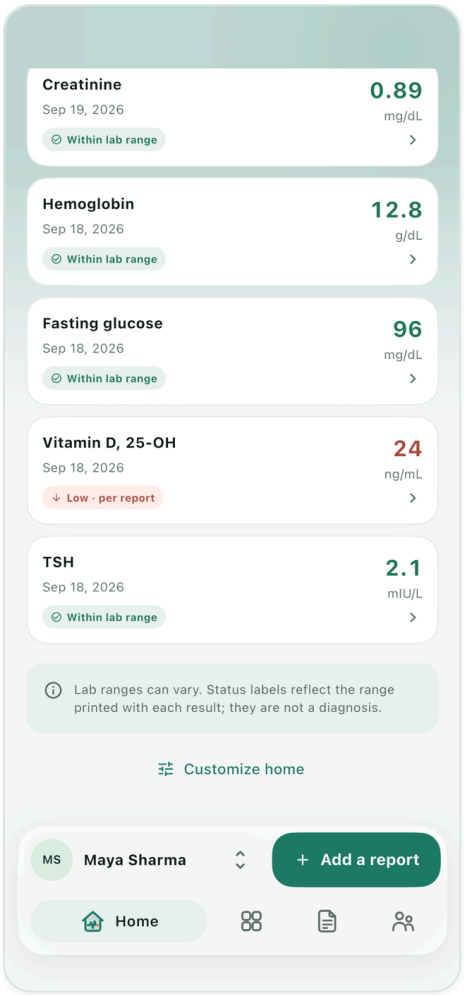

Needs attention and trends

Latest report and categories

- **At a glance** — how many of the latest results are within range, with a bar and a key: within range, high, low, needs review. Each has a word and an icon, not just a colour.
- **Needs attention** — the latest results that are high or low. Tap one to see its history.
- **Trends** — each test's latest value, the change since last time, and a small line over the normal range. If a value has gone the same way three times or more, it says so, e.g. "Up 3 times in a row".
- **Latest report** — the most recent report and its date.
- **Categories** — each group with "N outside range" if any of its tests are high or low.
- **Recent results** — the newest individual results.
- **Bell** (top) — reminders. A dot means one is due within 7 days.

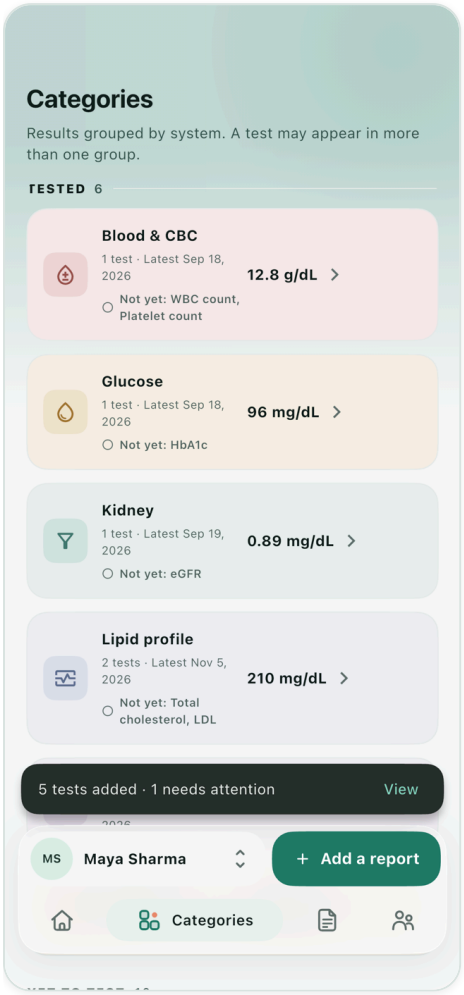

Recent results

You can hide sections you don't want (chapter 11).

> Vitalog shows what the lab printed. "High" or "Low" means outside the lab's range — it is not a diagnosis. Ask your doctor what a result means for you.

7. Categories

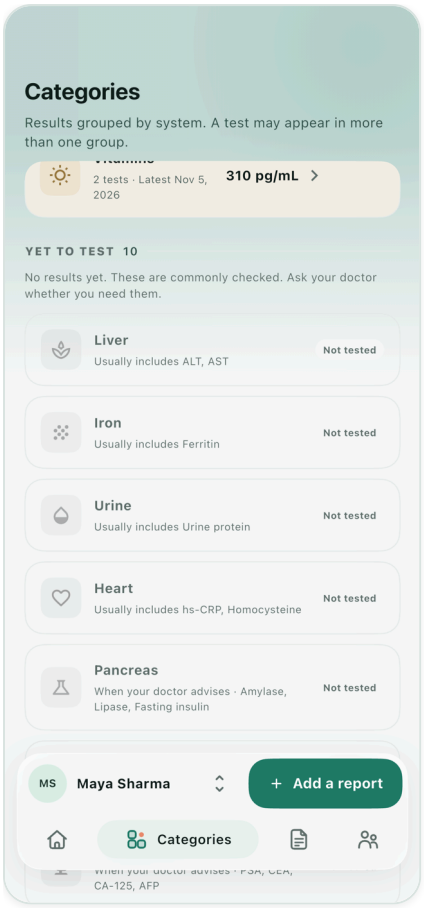

Tested groups

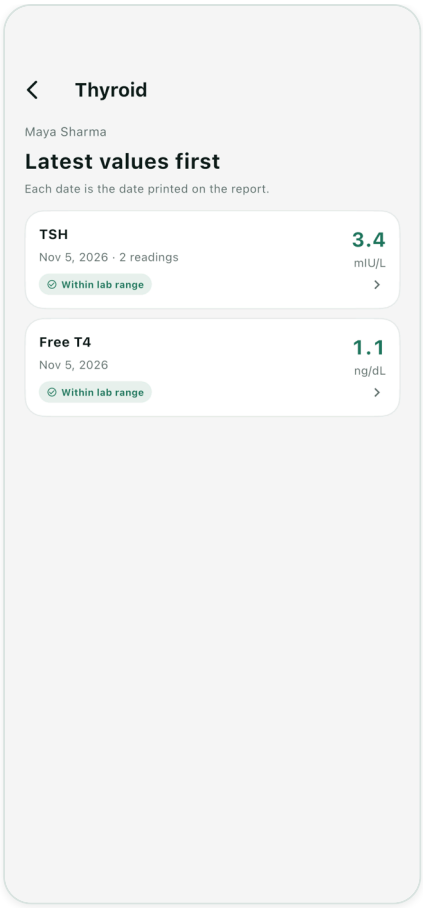

The Categories tab groups every test by body system — Blood & CBC, Glucose, Kidney, Liver, Lipid, Thyroid, Vitamins, Iron, Urine and more.

- **Tested** groups come first. If a group's usual tests haven't been done yet, it says **Not yet: …** with their names.
- **Yet to test** groups follow, greyed out.
- Some groups (pancreas, cancer markers, hormones, infections, clotting) are tests done **when your doctor advises**; they are never shown as missing.

Tap a group to see one tile per test, with its latest value and how many readings there are.

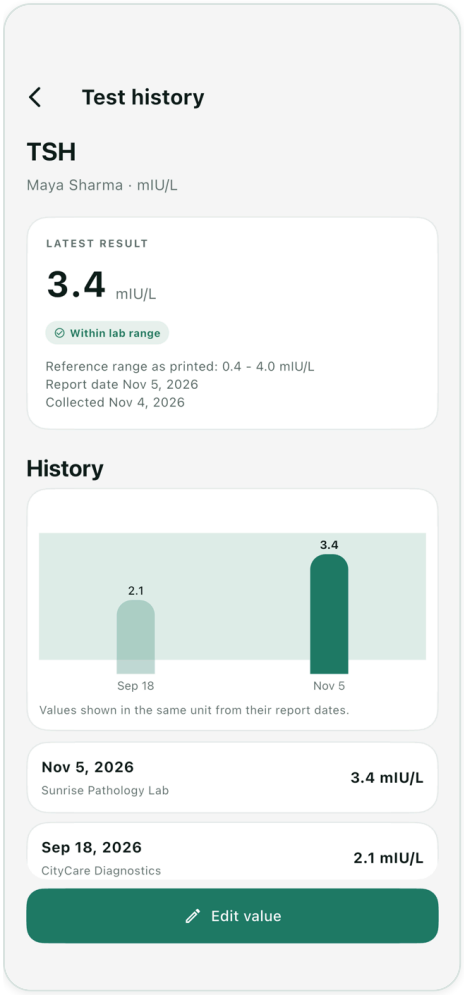

Yet to test

Inside a group

8. A test's history and fixing a value

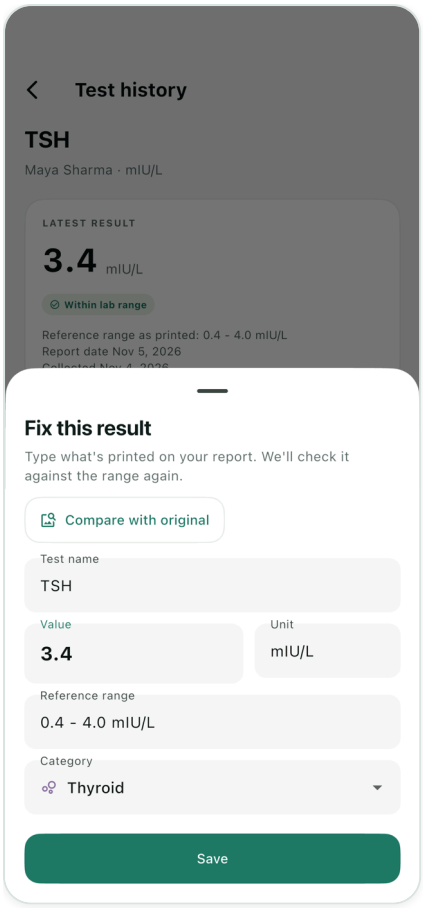

A test's history

Tap any result to see its whole history: a chart of every reading over the normal-range band, and a list of every dated value with its lab.

If something was read wrong

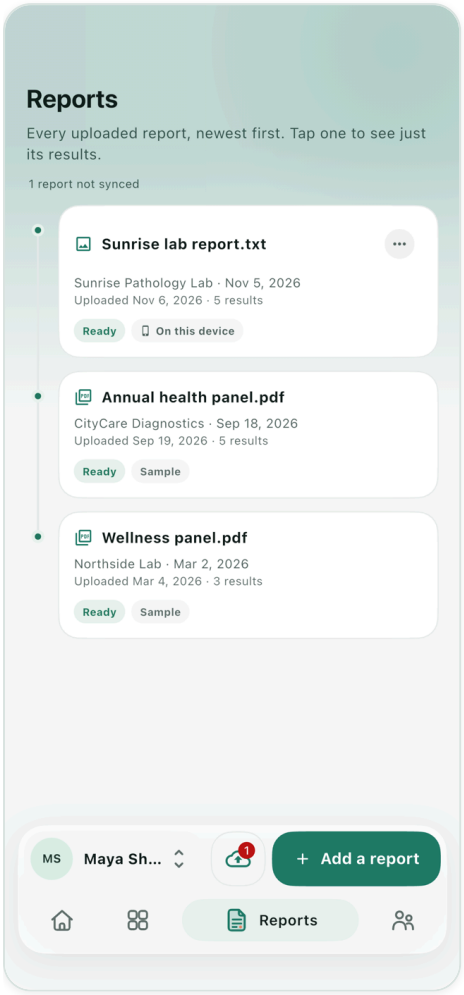

1. Open the test and tap **Edit value** at the bottom.
2. Type what's printed on your report — value, unit or range. Vitalog checks it against the range again.
3. Use **Compare with original** to see the report next to the value.
4. If the test is already correct, tap **Looks right**.
5. For a test Vitalog didn't recognise, pick its group. Vitalog remembers it for future reports.

When nothing is left to check, the report changes from **Needs review** to **Ready**.

Fix this result

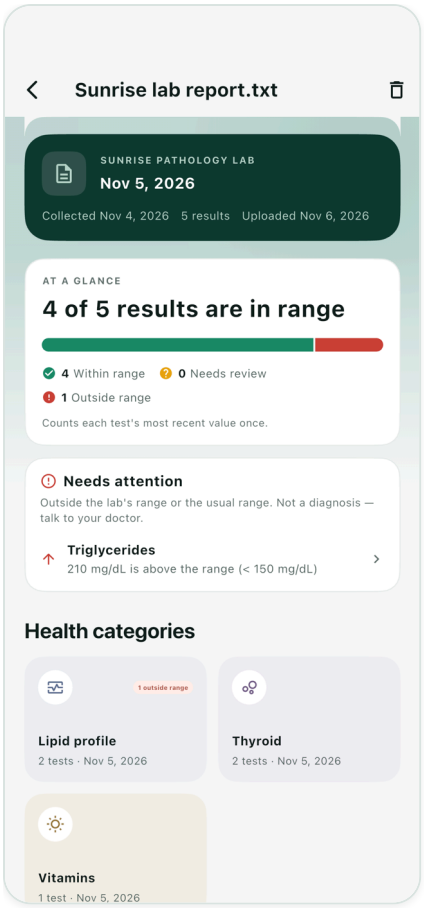

9. Reports timeline

Reports timeline

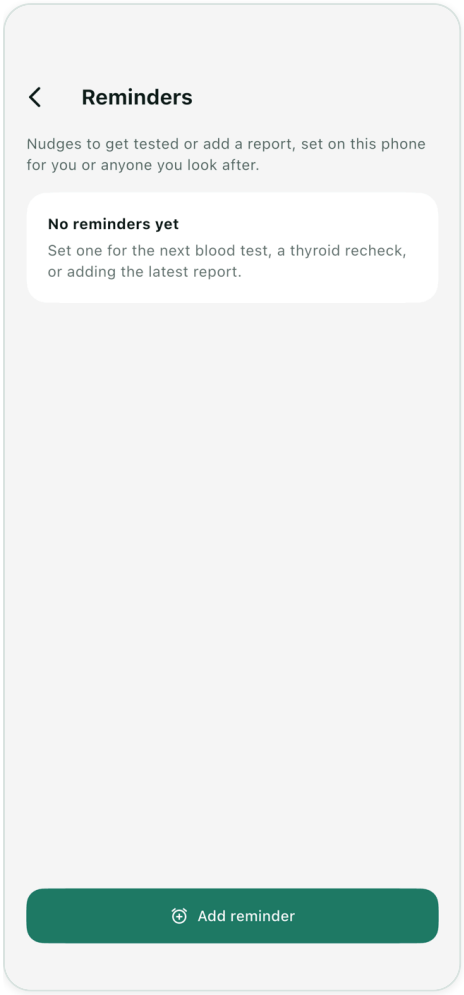

Every report for the selected person, newest first, with its lab, date, number of tests and status.

- **Tap** a report to open its own dashboard — Home, showing only that report's results.
- **Pull down** to refresh.
- **Press and hold** (or ⋯) for **Try again**, **Move to…** or **Delete**. Deleting asks first and says what will be removed.
- When signed in, **Sync** appears in the tray with how many reports aren't backed up yet.

One report's dashboard

10. Reminders

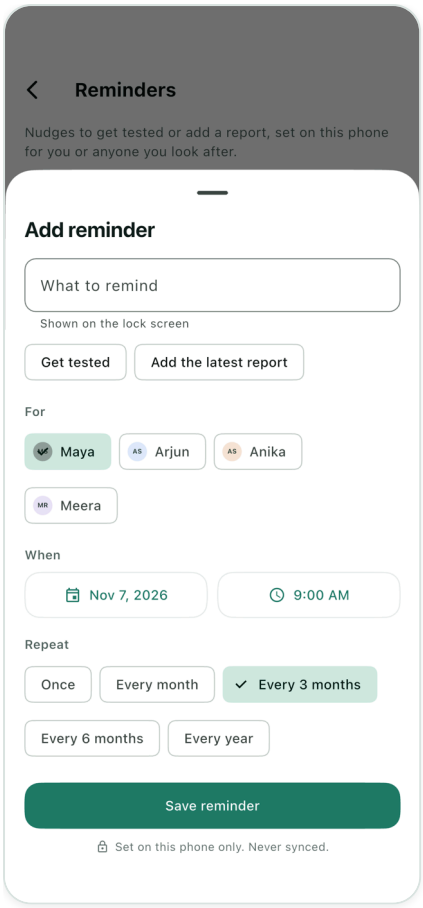

Reminders

Set a reminder for the next blood test, a thyroid recheck, or adding the latest report.

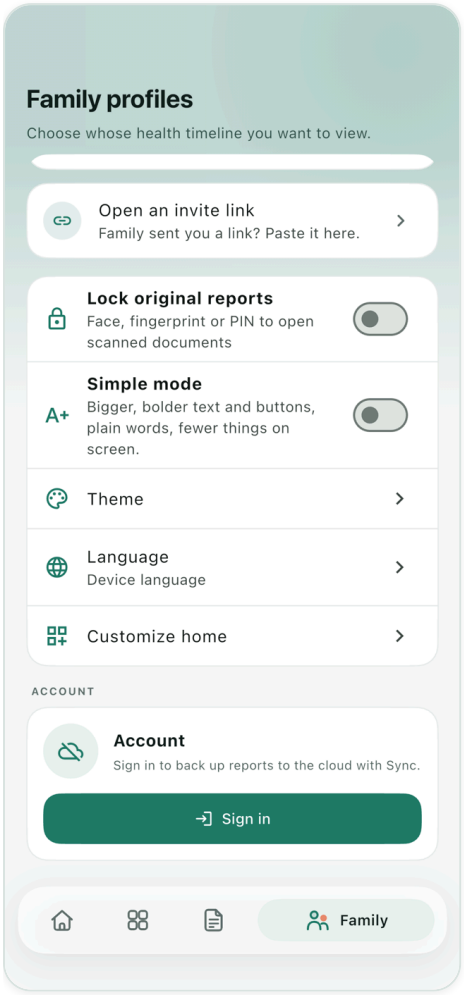

1. Tap the **bell** on Home (or Family → **Reminders**).
2. Tap **Add reminder**, give it a title, choose the person, the date and how often it repeats.
3. Allow notifications when asked. Vitalog explains why first; if you said no, it offers **Open Settings**.

The notification shows only your title and "Reminder for {name}" — never test names or values, so nothing private shows on the lock screen.

Add a reminder

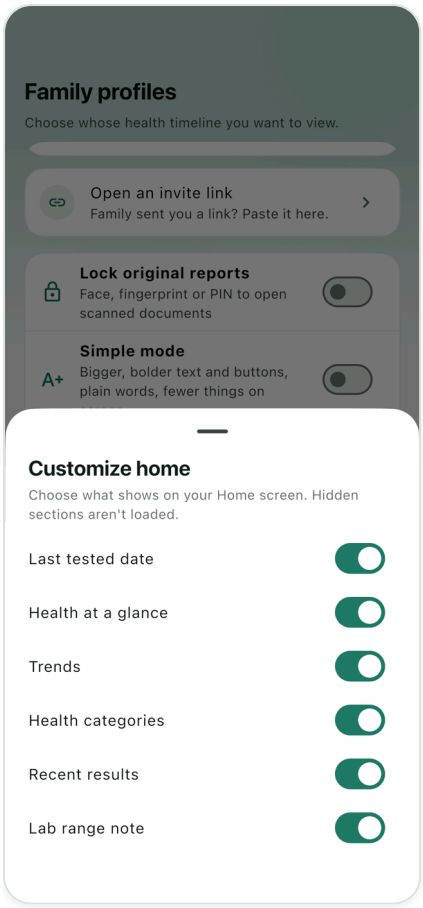

11. Display settings

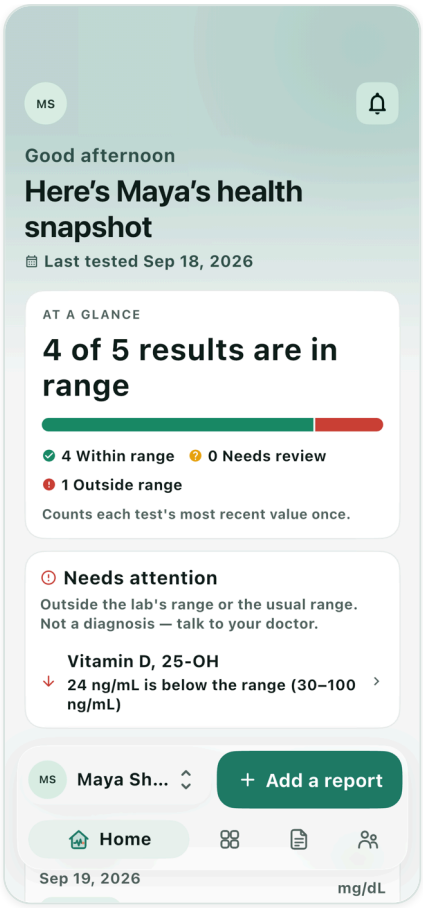

Settings on the Family tab

All settings are on the **Family** tab, below your family members.

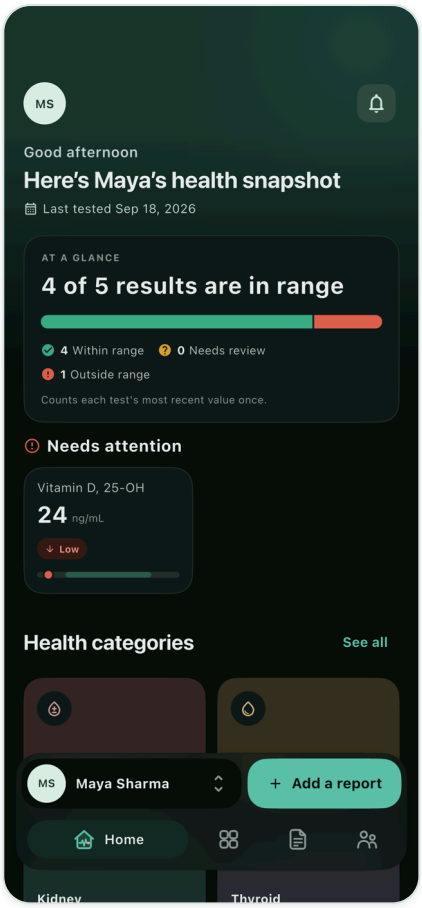

- **Simple mode** — bigger, bolder text and buttons, plain words ("Higher than range"), fewer things on screen. Made for older family members.
- **Customize home** — show or hide parts of Home.
- **Theme** — System, Light or Dark.
- **Accent** — Vitalog green, Ocean, Plum, Ember or Graphite.
- **Language** — English, తెలుగు (Telugu) or हिन्दी (Hindi).
- **Lock original documents** — see chapter 12.

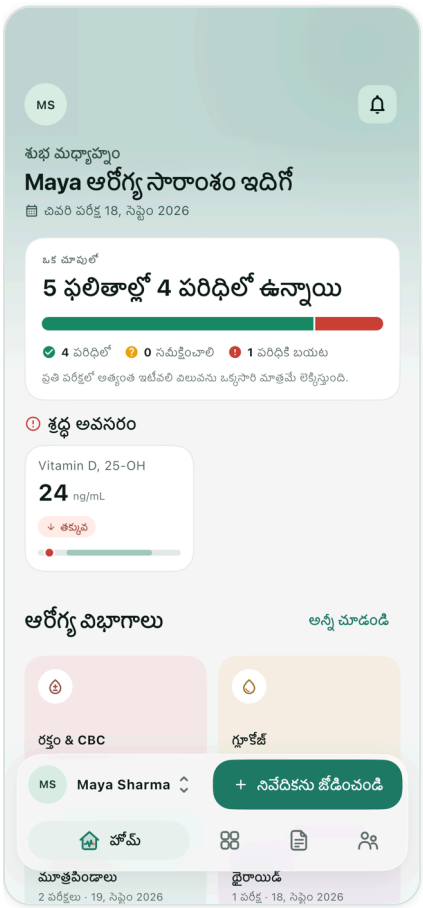

Customize home

Simple mode

Dark theme

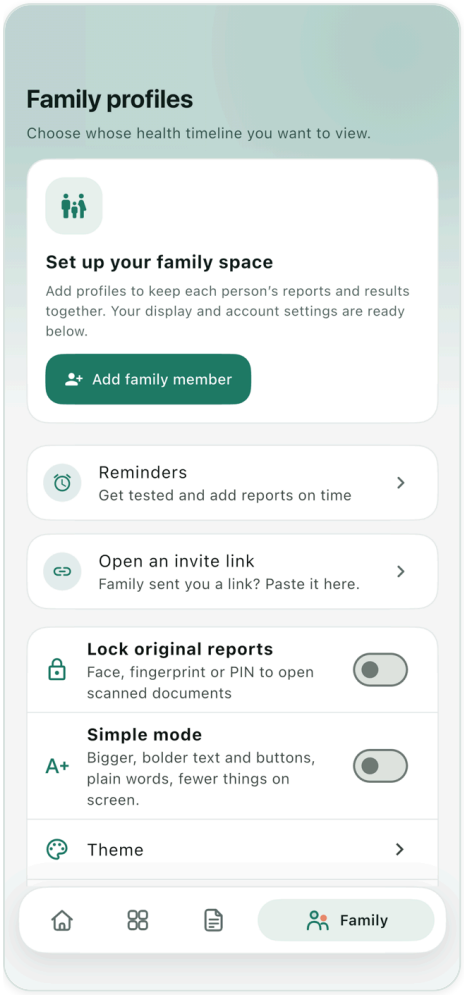

Telugu

Vitalog also follows your phone's text size, Bold Text and Reduce Motion settings.

12. Privacy and security

- **Read on your phone** — reports are read on the phone, never by an online service.
- **Locked on your phone** — results, family details, photos and reminders are stored encrypted. The key never leaves this phone.
- **Original documents** are encrypted separately. You can ask for **Face ID / fingerprint / phone PIN** each time an original is opened: Vitalog asks before your first report, and you can change it in Settings. It locks again after 2 minutes away from the app.
- **App switcher** — when you switch apps, Vitalog's preview is covered so results don't show.
- **Permissions** — before the camera, photos, Face ID or notifications prompt, Vitalog explains in plain words why it needs it.
- **Sync** — your data is sealed on the phone before it's sent. The server can't read names, tests, values or dates. Original documents are never uploaded.

13. Account, Sync and backup

Account card on the Family tab

Sign in

Family tab → **Account** → **Sign in**. Use Google, or email and password (you'll get a confirmation email; **Forgot password** sends a reset link).

Sync (back up)

1. Go to the **Reports** tab.
2. Tap **Sync** in the tray.
3. The first time, Vitalog shows your **recovery key**. Tap **Save to my passwords** (or Copy and keep it somewhere safe — the copy clears from the clipboard after a minute).

> **Keep your recovery key.** It's the only way to open your backup on a new phone if your phone's own keychain backup isn't there. Vitalog can't reset it for you. You can see it again on the Family tab.

New phone

Install Vitalog and sign in. Your family and reports come back by themselves; if asked, enter your recovery key.

Sign out / delete account

Family tab → account card. **Delete account** removes your account and everything backed up; what's on the phone stays until you remove it.

Sync, restore and sharing need a build connected to the Vitalog server. In builds without it, these buttons say "Cloud sync isn't set up in this build yet."

14. Share with family

Share a family member's reports with someone else — for example, so your sibling can also see your mother's reports. Everyone with access is equal: they can add reports and see new ones.

Invite someone

1. Family tab → press and hold the member → **Share**.
2. Tap **Invite someone**. Vitalog backs up that member and opens your phone's share sheet with an invite link.
3. Send the link by WhatsApp, SMS or email. Each link works once and expires.

Accept an invite

1. Tap the link (or Family → **Open an invite link** and paste it).
2. Vitalog shows who shared whom and how many reports. Choose who this person is to you.
3. Tap **Add to my family**. Their reports appear on Home.
4. If the invite is for **you** and you already have a "You" profile, Vitalog offers to **Combine** them.

See or stop sharing

Press and hold the member → **Share** shows who has access and pending invites. **Remove** someone, or cancel an invite. Removing the member from your own phone means you leave; the others keep their reports.

> The secret part of an invite link never reaches the server, so only the person you send it to can open the reports.

15. Big screens and holding the phone sideways

On a phone that opens up (like the iPhone Duo or an Android foldable) or a tablet held sideways, Vitalog uses the extra space:

- The tray stands on its side along the **left edge** — person at the top, tabs in the middle, Add a report at the bottom.
- Screens split in two: Home shows the status on the left and history on the right; Categories shows groups and results; Reports shows the timeline and the open report; Family shows people and settings.
- Folded or held upright, Vitalog looks just like it does on a normal phone.

16. Troubleshooting and questions

Problem	Try this
"Couldn't read" on a photo	Retake it flat, in good light, with the whole table in the picture. A PDF from the lab works best.
"Couldn't read" on a file	Old .doc/.xls files and unusual formats aren't supported. Save as PDF and add it again.
A value is wrong	Open the test → **Edit value** → type what's printed. Use **Compare with original**.
"Needs review"	Open the report, check the flagged tests, then **Looks right** or fix them.
Report added to the wrong person	Reports tab → press and hold the report → **Move to…**.
"Date not found"	The report had no readable date. Its results still count; the date can't be guessed from when you added it.
Sync says it isn't set up	This build isn't connected to the server yet.
New phone asks for a recovery key	Enter the key you saved after your first Sync (check your password manager).
Face ID keeps asking	That's the lock on original documents. Turn it off in Settings if you prefer.
No reminder arrived	Check notifications are allowed for Vitalog in the phone's Settings. On Android, reminders may arrive a few minutes late to save battery.
Text too small	Turn on **Simple mode**, or make the phone's text size larger.

Questions

Is my data sent to the internet? Only when you tap Sync, and then only in sealed form the server can't read. Your original documents never leave the phone.

Can Vitalog tell me if I'm ill? No. It shows what your lab printed. Please talk to your doctor.

What if the lab didn't print a range? Vitalog may use a standard "usual range" — only if it knows the unit, the person's sex and age — and labels it as such. Otherwise it marks the test Needs review.

Do I need an account? No. Everything except backup and sharing works without one.
